Three governing lenses for *Agentic work*

Authority

What governs meaning and action?

Provenance

Where did this come from?

Lifecycle

What can change from here?

CyberAlchemy LAB

Customer 1 reports missing entries.

Customer 1 — File under review

“Some entries are missing from our export.”

Investigate the saved export.

Snapshot 1 Database entries saved at one point in time.

CyberAlchemy
LAB

Authority over meaning

Complete customer export v1

Accepted

A customer export is complete when its returned entry IDs match exactly the IDs selected from the fixed database snapshot by the declared customer and filters.

Source	Snapshot 1
Filter	Customer = Customer 1 AND Status = Active

Service owner

Accepts this rule as Definition v1.

CyberAlchemy LAB

What each agent is allowed to do

Review agent

Inspect the named inputs.

Compare IDs and inspect traces.

Record the review.

Coding agent

Prepare proposed changes.

Replay and test code on Snapshot 1.

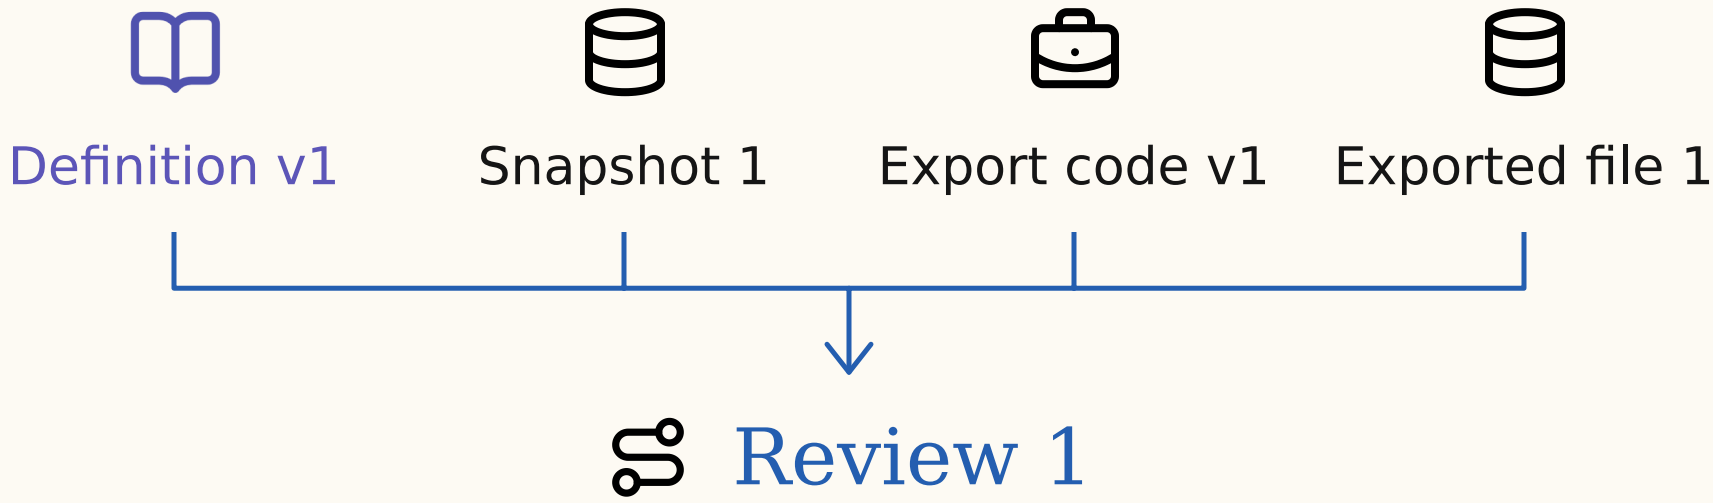

Neither may

× Change Definition v1

× Accept or release code

CyberAlchemy
LAB

Provenance of Review 1

Check for missing IDs and IDs outside the filter.

10,000
selected IDs

9,800
of those IDs found

200 missing IDs

Outside the filter 0 IDs

Export Incomplete

Cause Not established

CyberAlchemy
LAB

The last page was never read.

Trace 1

Recorded page requests
Snapshot 1 · Export code v1

Customer 1 · Active: 50 pages of 200 entries.

Pages

1–49

9,800 IDs read

→

stops

Page

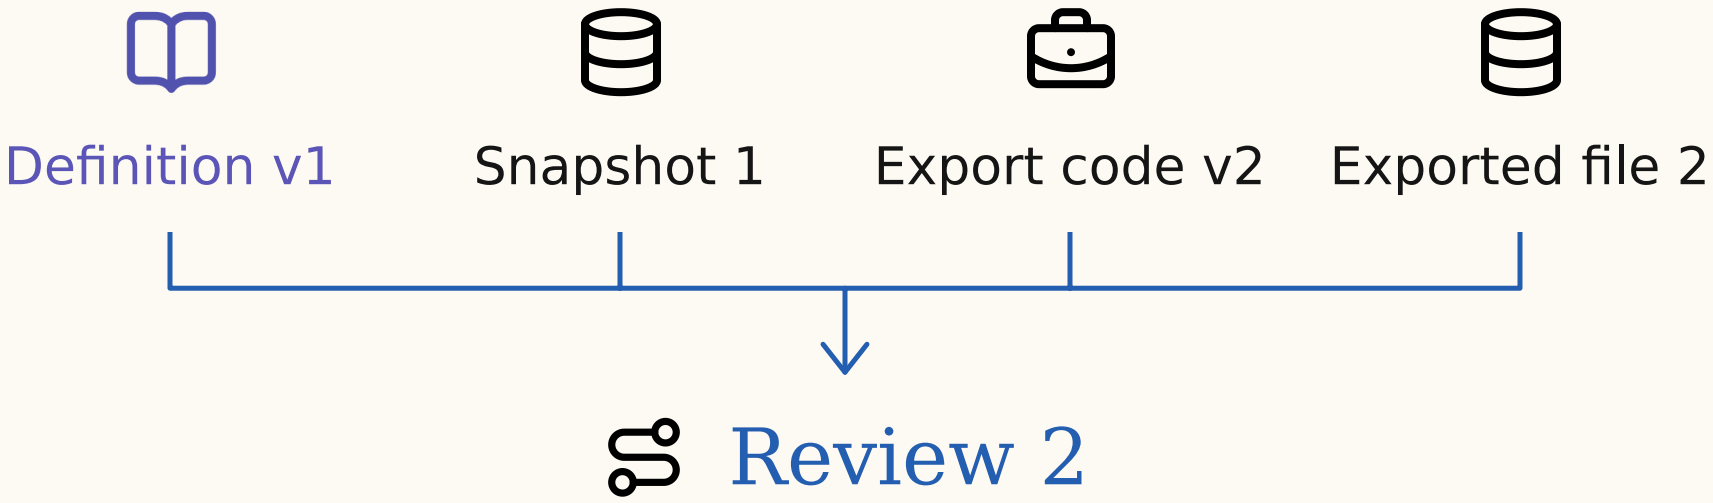

50

200 IDs unread

Export code v1 stops the loop one page too early.

CyberAlchemy
LAB

Export code v2 reads the last page.

Compare selected IDs with Exported file 2.

10,000	10,000
selected IDs	of those IDs found
0	0
missing IDs	outside the filter

Matches Definition v1 for Snapshot 1.

CyberAlchemy
LAB

Lifecycle of the code and the incident

Definition v1 stays unchanged.

Review 2 matches Definition v1.

Exact version: Export code v2

Service owner accepts code v2.

Release owner permits delivery.

Customer 1 · Exported file 2

Customer 1 receives the file.

Customer 1 confirms the result.

All selected IDs are present.

Incident owner records closure.

CyberAlchemy
LAB

The history stays in the project.

Review session

Coding session

Private memory ends with the session.
