Where things stand

CyberAlchemy
LAB

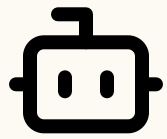

A customer’s request

Customer 1 wants its active database entries in a file.

Define what “complete” means

Write and run code

Check the file

Code and exported file → Checked against the rule

CyberAlchemy
LAB

Which entries belong in the export?

Use the full database copy saved at one time.

Query filter · both conditions must match

Customer = Customer 1 AND Status = Active

A few entries from the full copy

Entry ID	Customer	Status	
1	Customer 1	Active	✓ Required
10001	Customer 1	Inactive	×
10021	Customer 2	Active	×

↓

Every selected entry’s ID must be in the file.

CyberAlchemy
LAB

Who accepts the rule?

Service owner
Sets the requirements

accepts this definition

↓

Every selected entry’s ID must be in the file.

Write and run code

Check the file

CyberAlchemy
LAB

Permissions for two agents

Every selected entry’s ID must be in the file.

Neither agent has permission to change this rule.

Agent writing code	Agent reviewing it
Edit the code	Read the agreed copy, code and exported file
Run on the agreed database copy	Compare IDs and save the review

Neither has permission to release this to customers.

CyberAlchemy LAB

200 missing IDs

Customer 1’s active database entries.

Database copy → Code used → Exported file

Check every selected entry’s ID

Using the owner’s accepted definition

10,000

IDs selected from the database copy

9,800

of those IDs in the file

200 missing IDs

The file fails the accepted definition.

CyberAlchemy
LAB

For the next agent

The next agent starts with the saved review.

Coding session

Review session

save work under the project’s rules

↓

Saved project history

Definition and decisions

Code version

Database copy and file

Review: 200 missing IDs

choose records and how they connect

↓

Agent continuing the work

CyberAlchemy
LAB

Before customer release

The definition is accepted. The code still needs work.

Code awaiting acceptance

200 selected IDs missing

Run revised code and review the new file.
If the owner accepts this code version…

Accepted code

Get separate permission to release it to customers

Released to customers
